// projects

SAALTO Industrial IoT Platform — DOWNS (final-year internship, 2026)

Full-stack features for a platform that centralizes and leverages IoT sensor data.
› **Front-end:** dynamic, scalable interfaces with atomic state management (Jotai).
› **Data visualization:** analytical dashboards (Highcharts) for real-time client monitoring.
› **Environment:** Docker to isolate the development environment.

React · TypeScript · Tailwind CSS · Jotai · Highcharts · Ant Design · Docker

ARK Dedicated Game Servers — DevOps & Self-Hosting (personal project)

Containerized infrastructure for persistent game servers, focused on resilience and automation.
› **Containerization & automation:** persistent volumes, Bash lifecycle scripts, hot backups.
› **Networking & monitoring:** port forwarding (NAT/PAT), access security, real-time Discord webhooks.

Linux (Ubuntu, Arch) · Docker · Docker Compose · Bash · LAN/WAN networking · Automated backups · Webhooks (Discord API)

Personal Portfolio v2 — kevinbytebier.fr (in progress)

Modern, fast, fully typed single-page showcase with a dark design and neon-green accents.
› **Current challenges:** rendering performance, animations, filtering projects by skill (#Front, #DevOps).

React · TypeScript · Tailwind CSS · Vercel · Hostinger
